

Mohammad Aqil

Senior Angular Developer

Phone: +91-7892479388 | mdaqil7300@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY:

Software Engineer with **5+ years of experience** developing **enterprise-grade Angular applications** with a strong focus on **scalability, performance optimization, and user experience**. Experienced in designing and implementing robust front-end architectures using **Angular 19**, delivering modular, **reusable**, and **maintainable** codebases.

Strong expertise in **Angular, TypeScript, RxJS, NgRx, and AG Grid**, with hands-on experience in **REST API/GraphQL** integration, **state management, route guards, interceptors**, and large-scale workflow-driven UI systems. Proficient in **SonarQube, Docker, Kubernetes, CI/CD pipelines**, and AI-assisted development tools such as **GitHub Copilot**.

TECHNICAL SKILLS:

- **Frontend** - Angular 19, TypeScript, JavaScript (ES6+), HTML5, CSS3, Angular Material, Bootstrap, Responsive Design, RxJS, NgRx
- **Backend Integration** - RESTful APIs, GraphQL, JSON, Swagger
- **Tools & Platforms** - Git, GitHub, Postman, SonarQube
- **DevOps Exposure & Methodology** - Docker, Kubernetes (AKS), CI/CD, Agile (Scrum)
- **Other** - Cross-Browser Compatibility, State Management, Performance Optimization, Lazy Loading

WORK EXPERIENCE:

Accenture, Bangalore

Sep 2024 - Present

Client: Bank of America

Role: Senior Angular Developer

- Designed and developed **Post-Trade Applications** using **Angular 19, TypeScript**, and **feature-based** architecture for financial portfolio analytics.
- Built **UMR (Uncleared Margin Analytics)** UI in Angular with complex **state management using NgRx and RxJS**, for handling large editable datasets with **AG Grid**.
- Leverage **Angular dependency Injection** to build loosely coupled, testable, and scalable services across modules.
- Led migration of critical UI modules from **ExtJS to Angular 19**, improving application scalability, maintainability, and modular code structure.
- Developed interactive **dashboards**, validation workflows, file upload modules, and automated alert features to enhance operational efficiency and user productivity.
- Integrated **RESTful APIs** with proper **error handling, interceptors**, and **session management**.
- Followed best practices including **lazy loading, reusable components, and performance optimization**, contributing to stable production releases.

Infosys Ltd, Pune | Senior Systems Engineer

June 2021 - Sep 2024

Role: Frontend Developer

- Developed **Command Center Dashboard (CCD)** supporting multi-environment release tracking used by cross-functional teams.
- Built **Release Management System (RMS)** UI using **Angular + RxJS** with reactive real-time updates.
- Integrated **15+ REST APIs** and **GraphQL** with robust **validation** and centralized error handling.
- Improved UI **responsiveness** and **performance** through optimized **change detection** and modular architecture.
- Collaborated with **UX teams** to build responsive **production-ready UI** components.

ACHIEVEMENTS:

- Delivered **5+ enterprise Angular modules** using **feature-based architecture**, ensuring stable production releases with zero major post-release defects.
- Improved application performance by **30–40%** through **lazy loading**, optimized **change detection**, and modular architecture.
- Reduced recurring UI defects by **25%** by enforcing structured **code reviews** and **SonarQube** quality checks.
- Successfully migrated legacy **ExtJS modules to Angular 19**, improving long-term maintainability.
- Mentored **3+ junior developers**, accelerating feature delivery timelines through reusable component strategies and code quality improvements.

EDUCATION:

- Bachelor of Engineering (**B.E**) in **Computer Engineering** from **Dr D.Y.Patil College of Engineering, Pune** (Aug 2016 - July 2020).
